

ABSTRACT OF THE DISCLOSURE

5 A liquid crystal display device includes a first
substrate; a second substrate; a liquid crystal layer
interposed between the first substrate and the second
substrate; a first polarizer provided on a surface of the
first substrate which is on the opposite side to the
liquid crystal layer; a second polarizer provided on a
surface of the second substrate which is on the opposite
10 side to the liquid crystal layer; a first phase
compensation element provided between the first polarizer
and the liquid crystal layer; and a second phase
compensation element provided between the second polariz-
er and the liquid crystal layer. A plurality of pixel
15 areas are provided for display. The first substrate
includes at least one transmissive electrode, and the
second substrate includes a reflective electrode region
and a transmissive electrode region in correspondence
with each of the plurality of pixel areas.
